# CREP MIXTURES

The Conservation Reserve Enhancement Program (CREP) addresses high priority conservation issues of both local and national significance. Issues addressed include impacted water supplies, loss of critical habitat for threatened species, soil erosion and reduced habitat for fish populations. CREP is a community based, result oriented effort that may include elements of partnership among state, tribal, and private programs with Federal Service Agency elements of the CRP program. CREP mixtures may be designed for planting in pivot corners.
