

# TECHNICAL DATA SHEET

**ARROW SEED CO., INC.**

PO BOX 722  
BROKEN BOW, NE 68822

Phone: 800-622-4727

Fax: 308-872-6945

## **DURATURF Tall Fescue Blend**

- 25% DaVinci Tall Fescue
- 25% Titanium Tall Fescue
- 25% 2<sup>nd</sup> Millennium Tall Fescue
- 25% Inferno Tall Fescue

### **Seed Quality Specifications**

Minimum Purity .....	98.50%
Minimum Germination .....	85%
Maximum Crop Seed .....	0.03%
Maximum Weed Seed .....	0.01%
Certified and Sod Quality Available	

### **Characteristics & Use:**

- A fine textured dwarf and semi-dwarf turf-type Tall Fescue blend with excellent dark green color.
- High quality turf with lower inputs. Well suited for lower maintenance lawns, parks, and industrial turf.
- Superior disease resistance.
- Excellent drought avoidance compared to Kentucky bluegrass.
- Resistant to surface feeding insects like billbug, armyworm, and sod webworm.
- Tolerates full sun and moderate shade.
- Excellent traffic and wear tolerance once mature.

### **Establishment:**

- Tall Fescue germinates in 7-14 days
- Seeding rate: 6-10 lbs. /1,000 sq. ft. or 260 to 440 lbs. /acre
- For best germination results, seeding should be done when soil temperatures are at least 45 degrees Fahrenheit. As with all newly seeded areas, good seed and soil contact, as well as adequate moisture, is required for successful germination and establishment.

### **Cultural Practices After Establishment:**

- Mowing: range from 1 ½ inch to 4 inches; optimum quality achieved when mowed at 2 to 3 inches; best low-maintenance performance at 3 to 4 inches.
- Fertilization: 1 – 2 lb. Nitrogen per 1,000-sq. ft. in fall for best rooting and healthy turf. Higher fertility levels will increase turf quality, however irrigation and mowing requirements will increase as well.
- Irrigation: Applied as needed to avoid drought stress. Deep, infrequent irrigation is encouraged to maintain a healthy root system.
